Started on	Saturday, 22 August 2026, 1:40 PM
State	Finished
Completed on	Saturday, 22 August 2026, 2:09 PM
Time taken	29 mins 35 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```
#include<stdio.h>

int main(){
    int count=0;
    int n;
    scanf("%d",&n);
    int i=1;
    count++;
    int s=1;
    count++;

    while(s<=n){
        count++;
        i++;
        count++;
        s+=i;
        count++;
    }
    count++;
    printf("%d",count);
    return 0;
}
```

	Input	Expected	Got	
✔	9	12	12	✔
✔	4	9	9	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Time taken	19 mins 23 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
#include <stdio.h>

int main()
{
    int n;
    int count = 0;

    scanf("%d", &n);

    if(n == 1)
    {
        count++;
    }
    else
    {
        int i = 1;
        count++;

        for(; i <= n; i++)
        {
            count++;

            int j = 1;
            count++;

            for(; j <= n; j++)
            {
                count++;
                count++;
                break;
            }

            count++;
        }

```

```
36          count++;
37      }
38
39      printf("%d", count);
40
41      return 0;
42  }
```

Time taken	4 mins 30 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
#include<stdio.h>
int main(){
    int n;
    int count=0;
    scanf("%d",&n);

    for(int i=1;i<=n;i++){
        count++;
        count++;
        if(n%i==0){
            count++;
        }
    }
    count++;
    printf("%d",count);
    return 0;
}
```

Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
#include <stdio.h>

int main()
{
    int n;
    int c = 0;

    scanf("%d", &n);

    int i = n / 2;
    c++;

    while(1)
    {
        c++;
        if(i >= n)
            break;

        int j = 1;

        while(1)
        {
            c++;
            if(j >= n)
                break;

            int k = 1;

            while(1)
            {
                c++;
                if(k >= n)
                    break;

                c++;
                k = 2 * k;
            }

            j = 2 * j;
        }

        i++;
    }
```

```
46      printf("%d", c);
47
48      return 0;
49  }
```

	Input	Expected	Got

State	Finished
Completed on	Saturday, 22 August 2026, 2:25 PM
Time taken	9 mins 20 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
#include<stdio.h>
int main(){
    int n;
    scanf("%d",&n);
    int count = 2;
    int rem,rev;

    while(n!=0){
        count++;

        rem = n%10;
        count++;

        rev = rev*10+rem;
        count++;

        n/=10;
        count++;
    }
    count++;
    printf("%d",count);
    return 0;
}
```
